

Protect your valuable data and maintain business continuity

Choose BT Uninterruptible Power Supplies

Uninterruptable Power Supplies (UPS) are a great way of protecting both your valuable data and key equipment functionality ensuring you maintain business continuity in the event of a power failure or power issue.

BT UPS solutions are designed to meet a wide range of power management requirements and are scalable to ensure prolonged periods without power can be managed simply and effectively.

With a UPS from BT, you can:

Continue to operate during power outages - UPS's offer instant power to your key equipment when mains power fails, saving costs due to wasted downtime.

Help your organisation gain industry accreditations - Business continuity and data security are key to all organisations and are important both from an operational and customer confidence perspective. Our UPS 's are able to assist in the protection of data and help you to continue to operate and so form a key part in Disaster Recovery and Business Continuity planning.

Protect your sensitive equipment - Our UPS range offers online double conversion technology which ensures stable and uninterrupted power is supplied to sensitive equipment in the event of a power failure or power fluctuation.

Specify how long you wish to remain protected - The UPS Enterprise and Enterprise Plus range allow you to add expandable battery packs to ensure business continuity target times can be achieved in the event of a power failure.

Protect valuable data - Many organisations rely on databases to ensure their operations run smoothly. Sudden power surges or failures can corrupt databases and risk the loss of valuable data. Our UPS range can monitor power and in the event of a failure send single or multiple hibernate commands to Windows-based/SQL servers to ensure a controlled power-down sequence is performed.

Select a form factor to suit your IT environment - BT UPS Lite and Enterprise ranges are available in both rack and tower formats and are a shallow rack depth design (excludes Enterprise Plus which is rack mount only) that will allow them to fit into 600.00 mm deep cabinets.

BT UPS Lite Rack

BT UPS Lite Tower

BT UPS Lite range

This solution offers a simple level of protection in both rack and tower formats that are line interactive, true sinewave output units that also offer voltage stabilisation for simple and cost-sensitive scenarios.

BT UPS Enterprise Rack / Tower

BT UPS Enterprise Plus Controller and Battery Pack Unit

BT UPS Enterprise range

BT UPS Enterprise is a scalable, high-quality, double conversion true sinewave solution available in a multipurpose rack / tower format in 1 and 3 KVA options with optional battery expansion units. The BT UPS Enterprise Plus range offers 6 and 10 KVA controllers with base battery packs. Both solutions support an optional communications card to allow the controlled power-down of multiple devices.

To complement the BT UPS Lite and Enterprise range, we offer a range of upgrade options to include rack mount rails, rack mount Keyboard Video Mouse (KVM) units, cables, automatic transfer and maintenance bypass switches plus network communication cards.

Features at a glance

Here's a handy table to break down the main features and help you choose the right system for your business. Not sure which is right for you? We're always on hand to help.
